Subject: Introducing Demo IT Ltd - Pen Testing - A Report on your IT Resilience

Priority

Calibri 11 Bold Italic Underline Strikethrough Bulleted List Numbered List Indent Decrease Indent Increase Decrease Increase Undo Redo

Dear {firstname}

We have a new service we have just added called Penetration Testing (Pen Testing). Pen Testing is a simulated, but safe cyber-attack that takes a deep look into your IT devices & infrastructure to see if you are vulnerable to being hacked or having malware infiltrate your systems.

We will carry out all the test for you and we will be able to give you an in-depth report which we will go through with you.

- Identify misconfigurations, weaknesses, vulnerabilities, credentials and much more
- Gives you a full compliance report including ISO27001, PCI DSS, DORA, GDPR and more
- Demo IT provides a full report as well as executive summary along with the methods used and verifications to show how weaknesses were found
- Demo IT can provide professional services to fix any issues discovered

If you would like to see a sample AI Pen Test report, then click here [here](https://demoit.com/testreport): <https://demoit.com/testreport>

It also comes with a [5 page](https://demoit.com/execsum) executive summary: <https://demoit.com/execsum>

If you would like further information or to see it in action - reply to this email, or go to <https://demoit.com/demo>

Kind regards,

Steve
